

## Leagues

The screenshot shows the 'League Editor' window with a blue title bar and standard Windows window controls. It has three tabs: 'Information', 'Positions', and 'Settings'. The 'Information' tab is active. At the top, there is a text field for 'League Name:' containing the text 'BNR'. Below this, a list box labeled 'Leagues:' contains two entries: 'BNR' (highlighted in blue) and 'CORA'. To the right of the list box is a table for setting bonuses. The table has two columns: 'Points' and 'Money'. The rows are: 'Lead a Lap Bonus:' (5 points, 1000 money), 'Lead Most Laps Bonus:' (5 points, 1500 money), 'Pole Bonus:' (0 points, 2500 money), 'Lead @ Half Bonus:' (0 points, 1000 money), and 'High Climber Bonus:' (0 points, 0 money). At the bottom of the window, there is a status bar with icons for adding, editing, and deleting leagues, a label 'League: BNR', and a 'Close' button.

This is the main screen for Adding, Editing and Deleting leagues. The three tabs at the top of the screen switch between the different pages of settings for the current league. You can select a different league by clicking on it in the list to the left.

This first page is where you enter the league name and any bonus points/money that you want to use.

League: BNR
Close

The second page is a "grid" of points and money that are awarded based on the finishing position of a driver. When a new league is added, the points are defaulted to the Nascar style of points.

The third page is where you set the export settings for this league. Most of these settings should be self-explanatory. Please remember that the logo and background images need to have the **web** address to the files.

The Export path is where, on your hard drive, you want to create all the league stats.
