

Race Points Manager is a database application to provide league administrators of Papyrus' Nascar3/4 /02/03 racing leagues a fast, flexible way to maintain points standings and other statistics.

This is the main screen that you see as soon as you start the program. From this screen you can access most of RPM's functions.

The list of leagues is in the upper left corner. The list of seasons for the **current** league is in the lower left corner. The grid on the right is a summary of all the events for the currently selected season. The red marks on the grid indicate a completed event.

The eight buttons on this form perform almost all the functions in RPM. The tool buttons at the top of the form and the menu options mirror these capabilities.

Just hold your mouse over the tool buttons to see what they do.

The close button on this screen will exit the program.
